1 | Welcome to CloudSherpa

CloudSherpa is an intelligent cloud cost management platform designed to help organizations gain complete visibility into their cloud spending across multiple cloud providers. By combining cloud usage, costs and insights into a single, intuitive finOps dashboard, it eliminates the need to navigate between multiple cloud provider platforms.

The platform enables users to monitor cloud expenditure, identify unexpected cost increases and receive proactive recommendations to optimize resource usage and reduce unnecessary spending. Through real-time insights and predictive analytics, CloudSherpa helps organizations make informed financial decisions while maintaining efficient cloud operations.

By providing a unified view of multi-cloud environments and actionable cost optimization recommendations, CloudSherpa empowers businesses to control cloud expenses, maximise the values of their cloud investments and confidently manage their cloud platform.

Do I need to be a technical expert?

CloudSherpa is designed for both technical and non-technical users. It features a user-friendly dashboard that presents insights in a clear, intuitive manner, which enables users of any technical level to easily understand what is occurring.

2 | Getting Started

2.1 Accessing the System and Logging In

How to access the live deployment of CloudSherpa:

1. Navigate to <https://cloudsherpa.gjjcs.org>
2. Enter Username - bitflipper

3. Enter Password - UpInTh3Cloudz

To create an account with CloudSherpa, follow these steps:

1. If you are a new user:
 - (a) Click the **Register** button.
 - (b) Fill in the required information.
 - (c) Create a secure password and confirm your registration.
2. If you already have an account:
 - (a) Click the **Login** button.
 - (b) Enter your registered email and password.
 - (c) Click **Login** to access your dashboard.

By following these steps, you can immediately begin using CloudSherpa's features.

2.2 The Main Dashboard

Upon logging in the user is directed to the dashboard:

Insert Screenshot Here

(Main Dashboard showing the navigation sidebar and overview widgets)

Key areas of the dashboard:

- **Navigation bar:** User are able to navigate to various connections such as AWS, Azure and GCP. They are able to log out via the navigation bar or go back to the dashboard. The navigation bar is collapsible to give users a better view of what is being displayed on their screen.
- **Period selector:** The user can select which time period they would like to view the data being displayed. There are fixed period selectors such as 'last 7 days' or they can create a custom period that they desire.
- **Multiple dashboard:** More than one dashboards can be created via the 'Global cost overview' dropdown. The users can also navigate to dashboards that were previously created via the dropdown.
- **Customize widgets:** Users can design the dashboard in a way they desire. The widgets size can be adjusted and their positions can be changed. This can be done by using the pen icon (next to the 'Global cost overview dropdown'). They can further choose a graph they would like the data to be displayed in, from the options provided. The name of the widget can be customized and different types of data can be selected to be displayed eg.CPU.
